### [Tektro Review](#)

**Tektro CR520 Cantilever Brakeset**

**Forged aluminum arms**  
**Linear spring design**  
**Dual micro tension adjusters**  
**With 836.12 EN standard pads**

**Dimension** 21 - 35mm  
**Standard finish** black anodized  
**Weight** 139 grams / wheel (arms/pads only)340g for front & rear set  
inc all bolts, cables and  
straddle hangers

Tektro CR520 brakeset is a similar design to the traditional Froggleg brakeset, in comparison it has the same length cantilever arms and therefore offers the same leverage and power. It is superior to frogglegs in terms of adjustability and ease of setting up due to the variable camber on the brakepads. We recommend this brakeset for both cyclocross and touring bikes, particularly if you need to change brake pads mid way through

a cycle tour without workshop facilities

This is a full set (Front and rear) in black, they are complete with springs , straddle, cables,bolts,straddle hangers.

Please note, it is an OE brakeset so the item is not boxed

There is an optional high performance cartridge pad upgrade available for additional cost.

Fitting instructions available here :-
